3.6.	Generation of ToDo-list for OKRs (Intention).....	8
3.7.	Periodisation and archiving	8
3.8.	Access control (optional)	8

1. Introduction

Business Unit Helsepersonell (Helsepersonell) is a part of Norsk Helsenett SF which delivers the national infrastructure for sharing of data and handling of workflow in the Norwegian healthcare sector.

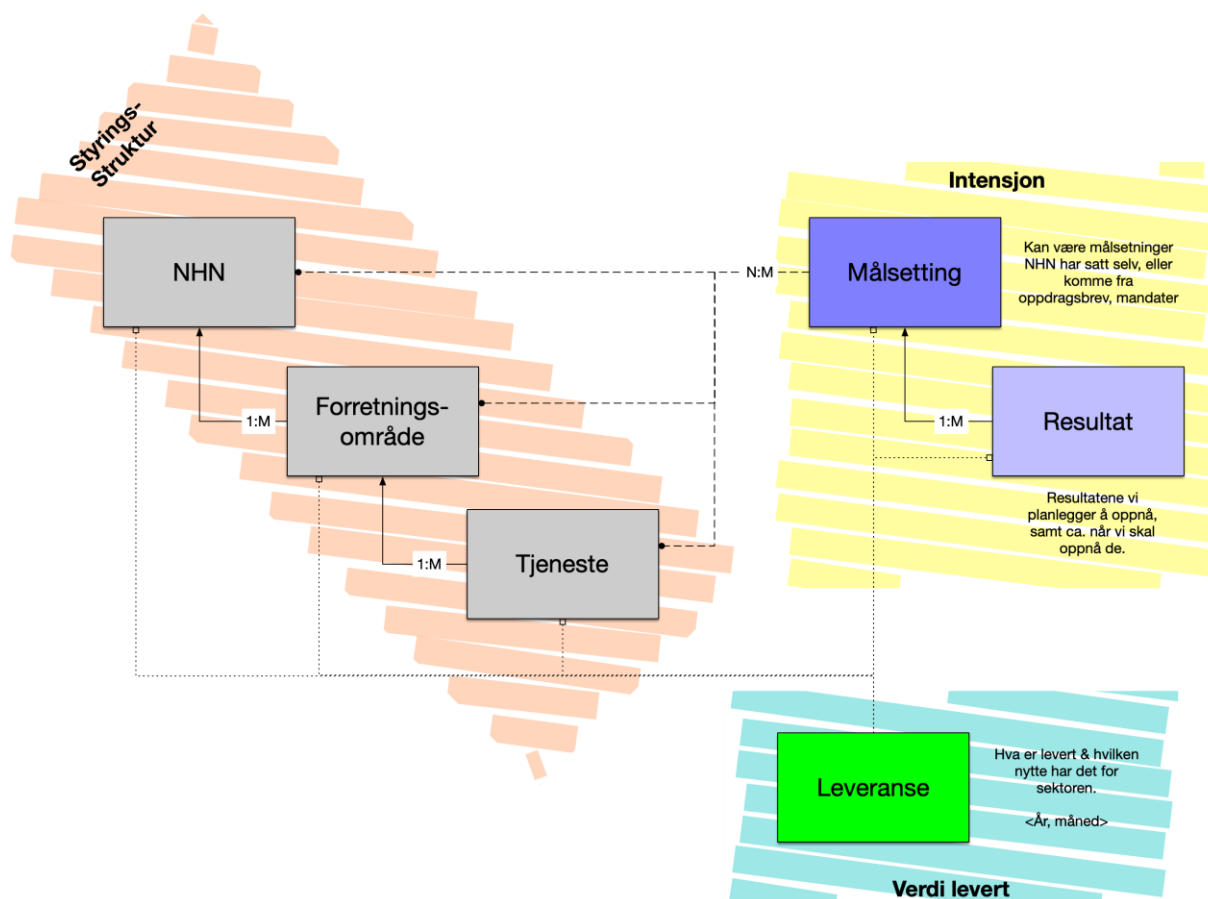

Helsepersonell uses Tiddlywiki for some key management areas

- Monthly business review of the different services that Helsepersonell provides
- Definition and tracking of OKRs for each service and the business unit
- Automation of reporting to the CEO and his team

Helsepersonell is currently using a vanilla installation for TiddlyWiki, but the quality of the input indicates that we need to simplify how the responsible individuals interact with TiddlyWiki.

2. Structure

The drawing below shows the structure that Helsepersonell is maintaining in TiddlyWiki.

The governance structure (Styringsstruktur) consists of NHN (this is one Tiddly which represent the mother company Norsk Helsenett SF). NHN consist of several business units (Forretningsområde), and each business unit owns and are responsible for a set of services. These services can be internal of external facing.

Each year we establish our intentions (Intensjon) for what we want to achieve on the different levels in the governance structure. We use a loss version of OKRs to do this; Objectives (Målsetting) and Key Result (Resultat).

We are running 3 week sprints and each time we deliver we register a delivery (Leveranse) in TiddlyWiki and link it to:

- The OKR structure (optional) or
- The Governance structure.

Whats not included in the drawing is that each month there is a business review where each services owner (Tjenesteeier) writes a small tiddly summarising business change, economic, severity flag (1 – 3) for each service. The business unit goes thru these based on severity and changes each month. Today they are linked in the business unit tiddly.

Today this is handled using tags in TiddlyWiki.

3. Simplification and automation

Based on the experiences that Helsepersonell has gained the last 2 years using plain TiddlyWiki we have some needs for simplification and automation in the usage of TiddlyWiki.

These are summarized in the chapters below.

3.1. Simplified navigation

We would like to make the menu on the right side of TiddlyWiki to show a reflection of:

- The governance structure with the Intentions.
- The business review structure separated in year and month.
- Summarised deliveries pr year and month
- Services grouped by Business unit and Service Owner

3.2. Simplified creation of “correct” tiddlies

We would like the user to be able to select which type of tiddly they want to create and be guided thru the creation, so that the tiddlies follows the correct structure

Optional: It would also be nice to have this for updating.

3.3. Export of information from the governance structure and business review pr. service

We want to be able to export information from the governance structure and business review pr. service in the following format.

Requesting two types of extracts.

Extract 1:

Requesting an Excel extract that shows all links (URLs) to tiddlers tagged with one of the following:

“«Styring Satsning for fart, Styring Tiltak, Styring Intern tjeneste, Styring Relatert tjeneste, or Styring Ekstern tjeneste»”.

The extract should include separate columns showing the **fields and tags** on the tiddler:

- ServiceID
- Division
- Service name
- Year
- Month
- Business change (Forretningsmessig endring:1, Forretningsmessig endring:2, Forretningsmessig endring:3)
- Governance (Styring Satsning for fart, Styring Tiltak, Styring Intern tjeneste, Styring Relatert tjeneste, or Styring Ekstern tjeneste)

It must be possible to filter/refine the extract by **year and month**.

			All tags					
Name of the tiddler	ServiceID	URL to the governance tiddler	Division	Service name	Year	Month	Business change	Governance type

Example of input:

03 Tiltak Pasientens måldata - hovedtrekk og endringer mars 2026	40056	https://tiddlywiki.plattform.nhn.no/#03%20Tiltak%20pasientens%20m%C3%A5ldata%20-%20hovedtrekk%20og%20endringer%20mars%202026	Divisjon Helsepersonell	Pasientens måldata	2026	Mars	Forretningsmessig endring:2	Styring Tiltak
03 Støtte og hjelpe Leverandører - hovedtrekk og endringer mars 2026	40051	https://tiddlywiki.plattform.nhn.no/#03%20St%C3%B8tte%20og%20hjelpe%20Leverand%C3%B8rer%20-%20hovedtrekk%20og%20endringer%20mars%202026	Divisjon Helsepersonell	Støtte og hjelpe leverandører	2026	Mars	Forretningsmessig endring:1	Styring på ekstern tjeneste

Extract 2:

Requesting an Excel extract that shows all links (URLs) to tiddlers tagged with one of the following:

“Ekstern tjeneste, Intern tjeneste, Relatert tjeneste, Tiltak, or Satsning for fart”.

The extract should include separate columns showing the **fields and tags** on the tiddler:

- ServiceID
- Division
- Service name
- Year
- Service type (Ekstern tjeneste, Intern tjeneste, Relatert tjeneste, Tiltak, or Satsning for fart)

It must be possible to filter/refine the extract by **year**.

			Alle Taggs			
Name of the tiddler	ServiceID	URL to the tiddler for service description	Division	Servicename	Year	Service type (Ekstern tjeneste, Intern tjeneste,

Example of input:

Pasientens måldata 2026	40056	https://tiddlywiki.plattform.nhn.no/#Pasientens%20m%C3%A5ldata%202026	Divisjon Helsepersonell	Pasientens måldata	2026	Mandater
Støtte og hjelp til leverandører	40051	https://tiddlywiki.plattform.nhn.no/#St%C3%B8tte%20og%20hjelp%20til%20leverand%C3%B8rer	Divisjon Helsepersonell	Støtte og hjelpe leverandører	2026	Ekstern tjeneste

3.4. Summarising of deliveries pr. year and/or month

We use the deliveries to report to the board and external entities. And would like to be able get an overview with the following information:

Overview of all tiddlers tagged with “Leveranse”, and with flexibility to group by:

- Year(Tag) -> Month(Tag) -> [Service (“Intern tjeneste” / “Ekstern tjeneste”)]
- [Service (“Intern tjeneste” / “Ekstern tjeneste”)] -> Year(Tag) -> Month(Tag)

Overview of all tiddlers tagged with “Målsetting”, and with flexibility to group by:

- Year(Tag) -> [Service (“Intern tjeneste” / “Ekstern tjeneste”)]
- [Service (“Intern tjeneste” / “Ekstern tjeneste”)] -> Year(Tag)

Overview of all tiddlers tagged with “Resultat”, and with flexibility to group by:

- Year(Tag) -> Service (“Intern tjeneste” / “Ekstern tjeneste”) -> “Målsetting”
- [Service (“Intern tjeneste” / “Ekstern tjeneste”)] -> Year(Tag) -> “Målsetting”

3.5. Generation of ToDo-list for business review

We would be like to be able to generate a ToDo list pr. month pr. service where the Service Owner has not established the business review tiddly for the service for the given month.

This must also check that it is just not the template and that it is not just a copy of last month.

It should be easy for the service owner to create the necessary tiddly from this ToDo list.

We can input the Service Owner on the Service tiddly.

3.6. Generation of ToDo-list for OKRs (Intention)

We would be like to be able to generate a ToDo list pr. year pr. service where the Service Owner has not established the OKRs for the service for the given year.

This must also check that it is just not the template and that it is not just a copy of last years.

It should be easy for the service owner to create the necessary tiddly from this ToDo list.

We can input the Service Owner on the Service tiddly.

3.7. Periodisation and archiving

We need a solution to be able to periodise the structure pr. year and maybe archive previous year – to be able to keep the clutter down.

3.8. Access control (optional)

We would like to be able to separate between who can work in TiddlyWiki and who can just read.

NHN uses Microsoft AD.
